4 DEC 1961

MEMORANDUM FOR: Deputy Director (Plans)

25X1A6a

SUBJECT

Hardening of

25X1A6a

1. We are beginning an engineering survey of the [REDACTED] 25X1A6a
[REDACTED] which will include a study of the terrain, the
subterranean structural formations, and other pertinent factors
in order to determine the feasibility of going underground or
otherwise hardening our facilities there. The ultimate object
of this survey is to have at hand and ready a completely engineered
program and operational plan of occupancy which could, with facility,
be transposed into a construction plan if the government-wide harden-
ing project (approved by the President on 9 June 1959) is implemented
or if funds should become available from any other sources.

2. To this end we must determine the needs and requirements
of all elements which would occupy the hardened relocation facility
in time of emergency. [REDACTED] extension 3938,
is ascertaining all of these factors and will work closely with
the firm of engineers which is making the survey. I would appreciate
your designating a representative to work with him on behalf of your
component.
